

Northern Flicker A woodpecker not commonly found here – this one in the palms near the 12th tee – but mostly forages for ants on the ground

Mottled Duck
The most common
duck in the Park –
resembles a female
Mallard with more
detailed brown and
buff plumage.

Mockingbird
Very common at Maple
Leaf found foraging on
the grass and nesting in
the palms – white
flashes on wings – a
wonderful versatile
singer.

Forster's Tern Regularly seen diving for fish in any of the lakes and ponds – watch closely, they are fast.

Kildeer
Watch for it on the ground - when flushed, has a cry that sounds like "killdeer" – fakes injury and retreats when nest is threatened.

Palm Warbler
Very common small
green warbler —
constantly wags its tail
when perched —
winters in Maple Leaf,
summers in Canada — a
real "snowbird"

Turkey Vulture
Nature's garbage
collection agency,
vultures eat only
carrion which they find
with their keen vision
& sense of smell – yuk.

Red-bellied
Woodpecker
Black & white barred
back, red patch on
back of neck and a
reddish belly (of
course)

Anhinga
This common diving bird is seen in the lakes with only his neck above water or on shore drying out. Male is shown – female has brown neck.

Brown Pelican
Feeds on small fish in
a spectacular plunge
dive – that must hurt!
Look for them on the
dock by the Veterans'
Memorial.

Voted 'Best Golf and Country Club' in Charlotte County in 2010

A Certified Audubon International Cooperative Sanctuary

Maple Leaf is proud to be a supporter of this great program which encourages protection of our wildlife heritage through environmentally responsible management of our facilities and course maintenance activities.

This brochure illustrates 25 of the many species of birds that either are residents or visitors to Maple Leaf.

Our habitat areas, lakes, ponds and creeks make our golf course a home for both year-round species and birds that winter in Florida.

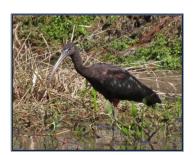

We hope you enjoy identifying the birds illustrated here – 15 would be an excellent score.

Great Egret
Can be seen standing in
the shallow waters
hunting for lizards and
minnows.

Sandhill Crane Very large birds that usually travel in pairs and with their kids, feeding on grubs in the soil – they are afraid of no-one.

Glossy Ibis
A cousin of the White
Ibis but with
iridescent bronze
plumage.

Bald Eagle
A frequent visitor to
Maple Leaf usually
seen perched in the tall
pines by the seventh
tee.

White Ibis
Found on the lawns
and fairways digging for
grubs or in the the
shallow waters of the
creeks and lakes – look
for the curved bill.

Cormorant
These accomplished
diving fishermen
often hunt in fleets in
the bigger lakes —
they are feathered
trawlers.

Common Moorhen Most commonly seen in the big lake near the 18th tee .

Little Blue Heron Forages along waters edge – it's blue beak and dark legs help identify this Maple Leaf resident

Wood Stork
Commonly found
walking the
shorelines fishing. In
flight, it looks like the
Concorde super-sonic
airplane.

Osprey
Outstanding fishermen
with sharp eyes and
talons - they nest on
tall poles or dead trees

Blue-gray
Gnatcatcher
Travel in groups, very
small, very fast, well
camouflaged in thicker
trees; watch for them
at #8 tee and #6
habitat.

Tricolored Heron Looks like a Little Blue Heron wearing a diaper.

Great Blue Heron Residents of Maple Leaf, fishing in the creeks and ponds and nesting in the tall pines on the 12th & 17th fairways.

Snowy Egret
Very similar to but
smaller than the Great
Egret with a "mullet"
of white feathers and
"golden slippers"
(yellow feet).

Green Heron
Small and stocky, it is
found on the
shorelines of the
lakes and creeks –
beautiful iridescent
green brown
plumage.
